

OSINT INVESTIGATION REPORT

MISSING PERSON

PREPARED BY

Anant Raj

B.Tech Computer Science & Engineering

GLA University Mathura

Investigation Domain

Open Source Intelligence (OSINT)

Date of Investigation

30 August 2026

Educational / CTF Investigation

CASE OVERVIEW

This report documents an **Open Source Intelligence (OSINT) investigation** conducted as part of the **TryHackMe “Missing Person”** cybersecurity training lab.

The objective of the investigation was to analyze the clues provided in the case and use publicly available information to identify relevant details about the missing person. The investigation involved collecting information from different online sources, analyzing digital clues, and correlating the findings to reach evidence-supported conclusions.

Investigation Objective

The main objectives of this investigation were:

- To analyze the initial clues provided in the case.
- To identify and verify important locations.
- To correlate information obtained from multiple sources.
- To reach a logical and evidence-based conclusion.

Investigation Details

Category	Details
Case	Missing Person
Investigation Type	Open Source Intelligence (OSINT)
Platform	TryHackMe
Investigator	Anant Raj
Purpose	Educational / Cybersecurity Training

Note:

This investigation was conducted solely for educational purposes within an authorized cybersecurity training environment. The techniques and findings documented in this report should not be interpreted as an actual police investigation.

INVESTIGATION SCOPE & METHODOLOGY

Scope of Investigation

The investigation was conducted within the **authorized TryHackMe training environment**. The focus was on using Open Source Intelligence techniques to discover and verify information relevant to the missing-person case.

The investigation was limited to:

- Publicly available information
- Information provided by the TryHackMe challenge
- Public search engines and websites
- Publicly accessible images and metadata
- Publicly available geographical information
- Cross-verification of information from multiple sources

No unauthorized access to private accounts, systems, databases, or restricted information was attempted.

Investigation Methodology

The investigation followed a systematic process. Each clue was first examined individually, followed by searches for additional information. Relevant findings were then compared with independent sources to determine their reliability.

The methodology used was:

- 1. Analyze Initial Clues**
Examine the information provided by the challenge and identify possible leads.
- 2. Information Discovery**
Use search engines and relevant OSINT techniques to locate additional publicly available information.
- 3. Identity Investigation**
Investigate names, usernames, profiles, or other identifiers discovered during the investigation.

4. **Image Analysis**

Examine images for visible clues and, where applicable, metadata.

5. **Location Investigation**

Analyze geographical clues and compare them with publicly available maps and location information.

6. **Cross-Source Verification**

Compare findings from multiple independent sources to reduce the possibility of incorrect conclusions.

7. **Evidence Correlation**

Connect related findings and determine how they contribute to the overall investigation.

8. **Final Assessment**

Summarize the verified findings and document the conclusion.

Investigation Principle

A single online finding was not treated as sufficient evidence. Relevant information was cross-checked with additional sources wherever possible before being considered a reliable finding.

TASK 1: CIRCUIT IDENTIFICATION

Task 1 — Identification of the Racing Circuit

Initial Evidence

The task provided two image files:

- MotoGP.jpg — an image of a motorcycle racing circuit.
- food.jpg — an image of a restaurant interior.

For this task, MotoGP.jpg was selected for investigation because it contained identifiable visual information related to a racing circuit.

Visual Analysis

The image was examined for distinctive features such as:

- Trackside advertisements
- Logos and branding
- Circuit infrastructure
- Motorcycle racing environment
- Other visible textual clues

A prominent “**PERTAMINA**” advertisement was visible alongside the circuit. This was identified as the primary search clue.

Evidence E-01 — MotoGP.jpg

Observation: The visible PERTAMINA branding provided a strong lead for identifying the circuit.

OSINT Verification

The keyword “**PERTAMINA**”, together with the visual information from the image, was investigated using an **image-based search/reverse image search**.

The resulting information was compared with publicly available photographs and descriptions of motorcycle racing circuits.

The visual characteristics of the circuit and the PERTAMINA branding corresponded with the circuit located in **Lombok, Indonesia**.

Evidence E-02 — Search Verification

Finding

The commercial name of the circuit is:

Pertamina Mandalika International Street Circuit

Location: Lombok, Indonesia

TASK 2: EVENT DATE IDENTIFICATION

Task 2 — Determining the Event Date

Metadata Analysis

As the first step of the investigation, the metadata of **MotoGP.jpg** was examined using a **third-party online image metadata analysis tool**.

The purpose of this step was to determine whether the image contained any useful information, particularly **date/time, location, or other metadata**, that could provide an initial investigative lead.

Evidence E-03 — Metadata Analysis

file_name	MotoGP.jpg
file_size	81 kB
file_type	JPEG
file_type_extension	jpg
mime_type	image/jpeg
exif_byte_order	Big-endian (Motorola, MM)
date_time_original	2025:10:05 12:33:12
create_date	2025:10:05

The metadata revealed a **date/time value**, which was treated as an initial lead for determining when the photograph was associated with the event.

Verification of the Metadata Finding

Since metadata can be modified, missing, or unrelated to the actual event date, the extracted date was not treated as conclusive evidence.

The date was therefore rechecked against independent information about the **2025 MotoGP Mandalika event**.

A targeted search for:

“MotoGP Mandalika 2025”

was conducted, and the event schedule was compared with the metadata finding.

Final Finding

The independent event information confirmed the relevant race weekend as:

03–05/10/2025

TASK 3: RESTAURANT IDENTIFICATION

Task 3 — Identifying the Mexican Restaurant

Image Analysis

The file **food.jpg** was examined for visual and textual clues.

The image showed a colorful Mexican-themed restaurant with distinctive decorations, wooden tables, and a bar area. The text “**CANTINA MEXICANA**” was visible on the yellow table in the foreground.

Evidence E-04 — food.jpg

Location Investigation

To identify the location of the restaurant, the image was uploaded to an **image-based location identification service**.

The service provided a geographical lead pointing toward **Lombok, Indonesia**.

This result was treated as a **location lead**, rather than conclusive evidence, and was used to narrow the subsequent investigation.

E-05— Image Location Analysis

Location-Based Verification

Using the identified location, restaurants in the **Kuta, Lombok** area were investigated.

The photographs available on restaurant listings were compared with food.jpg, focusing on:

- Interior design
- Yellow table
- Table arrangement
- Bar structure
- Decorations
- Overall appearance

The visual characteristics matched those of **Cantina Mexicana**.

Finding

The restaurant was identified as:

Cantina Mexicana

Location: Kuta, Lombok, Indonesia

TASK 4: PHOTO TIMESTAMP IDENTIFICATION

Task 4 — Determining the Time the Photo Was Taken

Metadata Analysis

To determine when food.jpg was taken, I examined the image's embedded metadata using a third-party online metadata analyzer.

The purpose of this analysis was to identify any available EXIF information, particularly the Date/Time Original field.

Evidence E-06 — Metadata Analysis

file_name	food.jpg
file_size	336 kB
file_type	JPEG
file_type_extension	jpg
mime_type	image/jpeg
jfif_version	1.01
resolution_unit	None
x_resolution	1
y_resolution	1
exif_byte_order	Big-endian (Motorola, MM)
exif_version	220
date_time_original	2025:10:05 19:55:30

The metadata analysis revealed a timestamp associated with the image:

19:55:30

Finding

The extracted time was recorded in the format required by the challenge:

[19:55:30]

TASK 5: BAR LOCATION IDENTIFICATION

Task 5 — Determining the Full Address

Initial Lead

The final message from the missing person mentioned a MotoGP after-party. This provided an important clue for identifying the bar/venue associated with the case.

A targeted search was conducted using:

“After Party MotoGP Mandalika 2025”

The search results led to a ticketing page for the **After Race Party Mandalika GP Vol.3**.

Event Verification

The event information indicated that the **After Race Party Mandalika GP Vol.3** was held on:

5 October 2025

The venue was identified as:

Mandalika Beach Club

The venue information was then used to determine the complete address requested by the task.

E-07 — Event/Ticketing Page

🔥 DJ Panda 🐼 is ready to drop the beats – fresh from releasing his brand new single with legendary trance DJ Alex M.O.R.P.H. 🎧

🌈 trance energy, after-race euphoria, and world-class music all in one night.

📍 The Mandalika Beach Club

📅 5 October 2025

🕒 Sunset till late

Let's celebrate racing weekend with music history in the making! 🎆

Reservation at 0818 0818 1009

Address Identification

The venue address listed for the event was:

Jl. Raya Kuta, Kuta, Kec. Pujut, Kabupaten Lombok Tengah, Nusa Tenggara Barat, Indonesia

Evidence E-08— Venue Address

Venue Details

Mandalika Beach Club

Kuta, Pujut

Kuta, Pujut, Central Lombok Regency, West Nusa Tenggara 83573, West Nusa Tenggara, 83573

Finding

Full Address

Jl. Raya Kuta, Kuta, Kec. Pujut, Kabupaten Lombok Tengah, Nusa Tenggara Barat, Indonesia

TASK 6: LOCAL DJ IDENTIFICATION

Task 6 — Identifying the DJ's Stage Name

Initial Investigation

The previous investigation identified Mandalika Beach Club as the venue associated with a MotoGP after-party. The event lineup was examined to determine whether one of the listed DJs matched the clues provided in the case.

The headliner was identified as DJ Panda. However, this did not match the required answer format and the case specifically referred to a local DJ.

Investigation Dead Ends

The other DJs listed in the event lineup were also investigated, including:

- DJ Arla
- DJ Alivia
- DJ Aldo
- DJ Rully
- DJ Rizki
- None of these names matched the required **4+5 character format**.
- Therefore, the initial event was considered a possible **false lead**, and the investigation was expanded to other MotoGP after-parties in the Kuta, Lombok area.

Breakthrough

Further investigation revealed that the after-party attended by the missing friend was held at:

Surfers Bar Kuta Lombok

The event was associated with the same MotoGP weekend.

The venue's social-media content, including **event reels**, was examined to identify the local DJ who performed at the event.

The DJ was identified as:

BONG LELEH

Evidence E-09 — Surfers Bar Event

Evidence E-10 — Social Media Reel

Finding

DJ's Stage Name:

BONG LELEH

TASK 7: CAVE IDENTIFICATION

Task 7 — Identifying the Cave

Initial Lead

The message from the missing person stated:

"We're going to visit a cave tomorrow."

Based on the timeline established during the previous tasks, this indicated that the planned cave visit was on 6 October 2025.

The investigation was therefore focused on caves located around the Kuta/Mandalika area of Lombok.

Location-Based Investigation

A search for caves near the Mandalika area produced several possible locations.

One of the initial possibilities was Goa Bangkang Prabu, also known as the Bat Cave. However, this was not selected because it did not match the required 3+6 character format.

Further investigation identified Gua Sumur as a suitable match. Gua Sumur is located in the Prabu/Pujut area of Central Lombok, near Kuta/Mandalika, and is known for sunlight entering the cave through openings in its ceiling.

Evidence E-11 — Cave Search

The closest famous cave system to Surfers Bar in Kuta Lombok is **Goa Bangkang Prabu**, located about a 12-minute drive west into the hills. 

Main Caves Nearby

- **Goa Bangkang Prabu:** A large limestone cave home to thousands of bats. It is famous for dramatic sunbeams shining through the ceiling holes.  Klook Travel +1
- **Gua Sumur Lombok:** Located in the same Prabu area, this "well cave" features unique vertical openings. Local guides offer special tours here to spot pythons and bats.  Tripadvisor +2

FINDING

The cave was identified as: **Gua Sumur**

TASK 8: BUSINESS PHONE NUMBER

Task 8 — Identifying the Phone Number

Investigation Lead

After identifying the local DJ as BONG LELEH, his online presence was investigated to identify information connected to his previous business activities.

The DJ's Facebook profile was used as an OSINT pivot point.

Social Media Investigation

A search for the DJ's Facebook account, @bongleleh, revealed profile information associated with a previous business venture.

A contact telephone number was listed on the profile.

Evidence E-12 — Facebook Profile

Not yet rated (0 reviews)

Number Normalization

The Indonesian country code +62 was removed because the task specifically requested the number without the country code.

The resulting local-format number was:

085333137345

Finding

085333137345

Investigation Timeline & Evidence Correlation

This is important because it shows how all your clues connect:

The investigation demonstrates the value of pivoting from one verified clue to the next, rather than relying on a single search result.

Conclusion

This investigation demonstrated how **OSINT techniques** can be used to collect, verify, and correlate information from publicly available sources. By analyzing images, metadata, locations, events, and social-media information, the required clues were successfully connected to reach the final findings.

Key Skills: OSINT • Image Analysis • Metadata Analysis • Geolocation • Social Media Investigation • Evidence Correlation
